Agile and DevOps

Q.1 One of the important practice of DevOps is to perform _____ continuously.	
A. Budget	B. Skillset
C. Testing	D. Legacy
Correct Answer: C	
Reference: Book name: Agile and DevOps principles for software projects, Page no 234, Table 13.1	

Q.2 DevOps are performed by _____	
A. Sales team	B. Software developers
C. Operations team	D. Management team
Correct Answer: B	
Reference: Book name: Agile and DevOps principles for software projects, page no 232, Heading 13.1	

Q.3 In the agile software development methodology, the interaction between different teams to create product increments is termed as _____	
A. Agile	B. Sprint
C. Lean	D. Scrum
Correct Answer: D	
Reference: Book name: Agile and DevOps principles for software projects, page no 236, Heading 13.2.1	

Q.4 The version control system monitors the _____	
A. Changes made to the source code	B. Changes made to the original code
C. Changes made to the destination code	D. Changes made by the software developer
Correct Answer: A	
Reference: Book name: Agile and DevOps principles for software projects, page no 239, Heading 13.5	

Q.5 SCM stands for _____	
A. Software Console management	B. Software configuration management
C. Sprint configuration management	D. System control management
Correct Answer: B	
Reference: Book name: Agile and DevOps principles for software projects, page no 238, Heading 13.4	

Q.6 _____ is a practice that focuses on value creation by removing the waste and non-value-adding factors from the business.	
A. Legacy	B. Software
C. Sprint	D. Lean
Correct Answer: D	
Reference: Book name: Agile and DevOps principles for software projects, page no 238, Heading 13.4	

Prepared by: Abrar Ahmed

Q.7 Checks that provide information about the ownership of the file and who made changes and when is called _____

A. Coordinating teams

B. Version control

C. Due diligence

D. Release management

Correct Answer: C

Reference: Book name: Agile and DevOps principles for software projects, page no 240, Heading 13.5.1

Q.8 _____ is a development practice that helps developers to integrate their code into the repository multiple times a day.

A. Continuous integration

B. Release management

C. Continuous testing

D. Continuous Delivery

Correct Answer: A

Reference: Book name: Agile and DevOps principles for software projects, page no 248, Heading 14.1

Q.9 _____ evaluates the system requirement with respect to business goals.

A. Continuous Testing

B. Continuous Delivery

C. Continuous Integration

D. Continuous Deployment

Correct Answer: A

Reference: Book name: Agile and DevOps principles for software projects, page no 254, Heading 14.3

Q.10 The development team for small projects is estimated and implemented quickly. This is called _____

A. Deployment date

B. Build date

C. Release date

D. Test date

Correct Answer: C

Reference: Book name: Agile and DevOps principles for software projects, page no 253, Heading 14.2.1, Table 14.1

Q.11 Why developers must test the build in the clone of the production environment?

A. Allow each team member to access the latest executable

B. To get the feel of correct output of the build

C. To easily deploy the application

D. To reduce the time taken for build

Correct Answer: B

Reference: Book name: Agile and DevOps principles for software projects, page no 250

Q.12 ARA stands for _____

A. Automated release application

B. Automatic release application

C. Application reference automation

D. Application release automation

Correct Answer: D

Reference: Book name: Agile and DevOps principles for software projects, page no 260, Heading 15.1.1

Q.13 Before performing continuous deployment, developers always perform _____ and

Prepared by: Abrar Ahmed

_____ [Multiple Choice]	
A. Continuous integration	B. Continuous Delivery
C. Continuous Monitoring	D. Continuous Deployment
Correct Answer: B, D	
Reference: Book name: Agile and DevOps principles for software projects, page no 260, Heading 15.1	

Q.14 Which of the following is not a Continuous Monitoring tool?	
A. Big panda	B. Pager duty
C. JMX beans	D. Zabbix
Correct Answer: C	
Reference: Book name: Agile and DevOps principles for software projects, Page no 271, Figure 15.6	

Q.15 _____ is a configuration management tool which ensures that all relative files and software are present on appropriate machine, configured correctly, and working as expected	
A. Jenkins	B. Puppet
C. Chef	D. Facter
Correct Answer: C	
Reference: Book name: Agile and DevOps principles for software projects, page no 296, Heading 16.4.5	

Q.16 Telemetry uses: 1. Agents installed in the deployment environments. 2. An SDK based on the markers inserted into source code. 3. Server logging	
A. Only 1	B. 1, 2, 3
C. Only 2	D. Only 3
Correct Answer: B	
Reference: Book name: Agile and DevOps principles for software projects, page no 270	

Q.17 Match the column						
Sl. NO	Left Column	Sl. NO	Right Column	Correct answer for column A		
A1	Time to Detect	B1	Ensure that the issues do not reappear	B1	B2	B3
A2	Time to Migrate	B2	Take necessary actions based on the issue	B1	B2	B3
A3	Time to Recur	B3	Send diagnostic data about the issues to the development teams	B1	B2	B3
Reference: Book name: Agile and DevOps principles for software projects, page no 269, Heading 15.3.3						

Q.18 The process by which the Ops team checks the operation of the application and ensure that the testing environment is stable is called _____	
A. Continuous Integration	B. Continuous Delivery
C. Continuous Monitoring	
Correct Answer: C	
Reference: Book name: Agile and DevOps principles for software projects, page no 265,	

Prepared by: Abrar Ahmed

Heading 15.3

Q.19 APM is the abbreviation of _____

A. Application Performance Management

B. Automated Performance Management

C. Application Performance Measure

D. Automatic Performance Metrics

Correct Answer: A

Reference: Book name: Agile and DevOps principles for software projects, page no 265, Heading 15.3.1

Q.20 Which of the following is not a benefit of Continuous Delivery?

1. Lower costs, better products, happier teams, Release date

2. Lower costs, better products, higher quality, Release date

3. Faster time to market, better products, happier teams, low risk release

4. Lower costs, better products, slower deployment time, Release date

A. 1

B. 2

C. 3

D. 4

Correct Answer: D

Reference: Book name: Agile and DevOps principles for software projects, page no 253, Table 14.1

Q.21 DevOps has four values:

1. Culture

2. Automation

3. Testing

4. Sharing

5. Measurement

A. 1,2,3,4,5

B. 1,2,3,5

C. 1,2,3,4

D. 1,3,4,5

Correct Answer: 1,2,4,5 as per book, option not present in the choice

Reference: Book name: Agile and DevOps principles for software projects, page 232, Heading 13.1

Q.22 The correct sequence in the software development cycle is:

1. Continuous Deployment

2. Continuous Delivery

3. Continuous Integration

A. 2,1,3

B. 1,2,3

C. 3,2,1

D. 3,1,2

Correct Answer: C

Reference: Book name: Agile and DevOps principles for software projects, page no 255, Heading 14.3.1

Q.23 _____ enhances the overall speed of deployment and makes the process more reliable

A. Continuous Integration

B. Automation

C. Integration Testing

D. Unit Testing

Correct Answer: B

Prepared by: Abrar Ahmed

Reference: Book name: Agile and DevOps principles for software projects, page no 250, Heading 14.1.2

Q.24. Match the column

SI. NO	Left Column	SI. NO	Right Column	Correct answer for column A		
A1	Continuous Integration	B1	Manual process	B1	B2	B3
A2	Continuous Delivery	B2	Integration of source code	B1	B2	B3
A3	Continuous Deployment	B3	Automated process	B1	B2	B3

Reference: Book name: Agile and DevOps principles for software projects, page no 255, Heading 14.3.1

Q.25 Match the following components with their explanation

SI. NO	Left Column	SI. NO	Right Column	Correct answer for column A				
A1	Continuous monitoring	B1	Co-ordinate different deployment processes	B1	B2	B3	B4	B5
A2	APM	B2	Reduced IT costs	B1	B2	B3	B4	B5
A3	ARA	B3	Ensures that the testing environment is stable	B1	B2	B3	B4	B5
A4	Orchestration	B4	Released into production as soon as it is ready	B1	B2	B3	B4	B5
A5	Continuous Deployment Monitoring	B5	implement	B1	B2	B3	B4	B5

Reference: Book name: Agile and DevOps principles for software projects, page no 275, Session 15 Summary

Q.26 Which of the following helps Virtual machines to coordinate faster and give the required support efficiently?

A. Test Automation

B. ARA tools

C. Software delivery process

D. Cloud infrastructure

Correct Answer: B

Reference: Book name: Agile and DevOps principles for software projects, page no

Q.27 Which of the following best defines Cloud Orchestration?

A. A software development practice which believes in building coordination

B. Automated testing on the new source code

Prepared by: Abrar Ahmed

between the development team with the operations team to achieve high quality software results	
C. The self-service interface that enables users to manage and co-ordinate the application	D. None of the above
Correct Answer: B	
Reference: Book name: Agile and DevOps principles for software projects, page no	

Q.28 The correct sequence of steps to setup a basic deployment pipeline is: 1 Add a deployment step. 2. Set up a build server. 3. Set up a few test suites.	
A. 1,2,3	B. 2,3,1
C. 3,2,1	D. 3,1,2
Correct Answer: B	
Reference: Book name: Agile and DevOps principles for software projects, page no	

Q.29 The goal of continuous testing is _____ and _____ in the latest build.[Multiple Choice]	
A. Reducing delivery time	B. Evaluating business risk coverage
C. Providing rapid feedback about business risk	D. Improve process
Correct Answer: B	
Reference: Book name: Agile and DevOps principles for software projects, page no
